Ciaran is a member of CIBSE, with an Honours Degree in Building Services Engineering and over 8 years' experience in the building services industry. He provides expertise in the design of mechanical and electrical building services.

As an expert in Dynamic Simulation Modelling, Ciaran is able to characterise a buildings energy demands through advanced energy assessment software. His role includes the application of mechanical design and calculations, as well as use of simulation software for thermal calculations and summertime overheating calculations.

Ciaran has substantial experience undertaking assessments, designs and installations of low or zero carbon solutions. He has experience of working on various high profile projects, ranging from major mixed use developments to town centre regeneration schemes. These projects have included working with ESCOs to provide solutions which meets planning obligations set out in the London Plan, along with schemes encompassing small-scale CHP coupled with boilers to supply the heating and hot water.

With particular experience in undertaking energy assessments within the GLA area, including negotiating energy commitments, Ciaran's fast-growing experience and enthusiasm makes him an important member of Envision's team.
