Sam's background in architecture and sustainable building design allows him to provide a key role in addressing energy and sustainability issues facing the built environment.

Since joining Envision, Sam has led the development of sustainability and energy strategies across a wide range of schemes. He has worked collaboratively with design teams in a number of key project areas, from low-carbon design in residential developments, to achieving high BREEAM ratings for a large number of retail developments.

Sam is also able to advise clients on the integration of key sustainability and energy issues into projects, from initial planning through to post-occupancy. His multi-disciplinary background allows him to effectively engage with a project's design team in order to successfully achieve sustainability and energy objectives.

Working with the diverse team at Envision, he strives to deliver projects that excel in sustainability and low-carbon credentials, whilst retaining the commercial viability necessary in an ever-evolving building industry.
